

E. M. Yeaseenur Rahman Tahin

Head of Engineering | Technical Leader | Engineering Excellence
Dhaka, Bangladesh • tahin.36@gmail.com • www.tahins.me

EXECUTIVE SUMMARY

Engineering leader with 13+ years of experience building high-performing teams and delivering complex, mission-critical platforms. Deep background in security and compliance engineering (PCI-DSS, PSP licensing, Bangladesh Bank), event-driven systems, order reconciliation, and AI/GenAI platform development. Experienced in leading multi-team engineering organizations, defining architecture standards, and driving cloud-native transformation. Now bringing this depth to a high-integrity financial technology environment where correctness, traceability, and reliability must be engineered - not assumed.

CORE COMPETENCIES

- Engineering Leadership & Team Scaling
- Security & Compliance (PCI-DSS, PSP, Bangladesh Bank)
- Event-Driven Architecture
- Order Reconciliation & Double-Entry Accounting Systems
- AI/GenAI Platform Engineering
- CI/CD & DevSecOps
- Cloud-Native Architecture
- Microservices Design
- Kubernetes (Migration)
- Agile / TDD

PROFESSIONAL EXPERIENCE

Staff Software Engineer | **Chaldal Limited** | Feb 2024 – Present

Leading engineering delivery across a portfolio of 7 platforms at one of Bangladesh's largest e-commerce operations: Grocery & Supply Chain, Warehouse Operations, Chaldal Vegetable Network, Cookups, HR Platform, Internal Communication Tool, and Inventory Investment Platform.

- Overseeing technical delivery across 7 business-critical platforms: **Grocery & Supply Chain, Warehouse Operations, Chaldal Vegetable Network, Cookups, HR Platform, Internal Communication Tool, and Inventory Investment Platform** - spanning e-commerce operations, logistics, perishable-supply, food-tech, and internal enterprise tooling.
- Designed and maintained a double-entry order reconciliation system ensuring all grocery orders, payments, and accounting records balance at end of day — providing ledger-grade integrity across high transaction volumes.
- Built and deployed an AI-based leave management system, leveraging GenAI to automate HR workflows - one of several AI-powered internal tools introduced under this role.
- Leading the engineering team's adoption of AI agents for operational workflows including delivery, demonstrating hands-on GenAI system engineering in a production environment.
- Implemented PCI-DSS security standards and coordinated directly with Bangladesh Bank to satisfy regulatory requirements for the company's PSP license.
- Deployed 2FA enrollment system for internal VPN users, hardening access security across the organization.
- Led the development of internal HR and communication platforms, driving cross-functional engineering execution and delivery.
- Conducted security training for the engineering team and oversaw application security compliance across all platforms.

- Contributed to the early migration from a Service Fabric-based stack to Kubernetes, supporting architectural modernization at the infrastructure level.

Software Engineer (L5) | Chaldal Limited | Mar 2021 – Feb 2024

- Led the Cookups engineering team from inception through multiple product launches.
- Worked extensively with Chaldal's homegrown event-driven messaging framework (Subject) - built on top of Microsoft Orleans, an actor-based distributed framework - enabling asynchronous, decoupled service communication at scale.
- Drove development of key capabilities in the company's in-house frontend framework.
- Participated in technical recruitment and mentored junior engineers.

Staff Software Engineer | Infolytx | Apr 2019 – Feb 2021

Led multiple engineering teams (5–10 engineers each), drove cloud-native transformation, and built AI-powered platforms.

- Re-architected HAL - a smart chatbot backend framework - improving scalability, maintainability, and system reliability.
- Built production AI agents (Anna, Clara, My Mindful Buddy) using NLP and GenAI, establishing early AI engineering practices across the organization.
- Led a company-wide UI/UX Special Interest Group, raising engineering quality standards and cross-team consistency.
- Drove the company's migration to a cloud-native architecture - including infrastructure modernization and service decomposition.
- Developed a React component library and project templates to standardize delivery and reduce time-to-production.
- Conducted regular code reviews and enforced engineering best practices across teams.

Senior Software Engineer | Infolytx | May 2017 – Mar 2019

- Architected frontend codebases and defined technology stacks for multiple concurrent client projects.
- Led company-wide migration to the ReactJS ecosystem - managing change at organizational scale.
- Architected the original backend system for the HAL chatbot framework.
- Introduced Gitflow, semantic versioning, and streamlined CI/CD pipelines - improving release safety and engineering discipline.
- Ensured adherence to Agile and TDD practices across all engineering teams.

Technical Consultant | Genex Digital | Dec 2019 – Jul 2020 (Part-time)

- Provided technical consulting on software architecture and engineering practices to Genex Digital alongside full-time employment.

Head of Product Management | Green and Red Technologies Ltd. | Apr 2015 – Apr 2017

- Led frontend development team and owned the full product lifecycle from planning and prioritization to delivery.
- Defined product vision and roadmap, collaborating across engineering, design, sales, and marketing.

Software Engineer | Green and Red Technologies Ltd. | Mar 2013 – Mar 2015

- Built Rongdhonu - a UI framework on top of Bootstrap aligned to brand guidelines.
- Developed the Ad Creator Tool enabling non-designers to produce professional ad creatives.
- Contributed to GoromCha Email - a Bengali email service built on Roundcube.

Front End Engineer | ManGoes Mobile Ltd. | Mar 2012 – Feb 2013

Software Engineer | Ulkasoft | Dec 2010 – Aug 2011

TECHNICAL SKILLS

Languages & Frameworks: JavaScript / TypeScript, React, React Native, Node.js; familiar with Java/JVM ecosystem

Event-Driven Systems: Chaldal Subject framework (built on Microsoft Orleans actor model); familiar with Kafka patterns and event-driven architecture principles

Architecture: Microservices, cloud-native platforms, distributed system design, Service Fabric to Kubernetes migration

AI / GenAI Engineering: AI agent development, NLP, GenAI-powered internal tools, AI-assisted engineering workflows (leave management, delivery ops)

Reconciliation & Integrity: Double-entry order reconciliation, transactional consistency, accounting record integrity at scale

DevSecOps & Compliance: CI/CD pipelines, Gitflow, semantic versioning, PCI-DSS, 2FA, VPN security, Bangladesh Bank regulatory compliance

EDUCATION

B.Sc. in Computer Science and Engineering — BRAC University, 2011
